**Period for Reply**

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

## DETAILED ACTION

### ***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claim 1 is rejected under 35 U.S.C. 102(b) as being anticipated by Gay et al.

(USPN 5,394,029)

With regards to claim 1, Gay et al. (USPN 5,394,029) teaches a signal processor for use an electronic compass for processing signals from geomagnetic compass sensor detecting sine or cosine wave signals induced by a drive signal according to an azimuth angle, comprising:

an analog signal processor amplifying the signals from voltage generated during an amplification process in response to an offset control signal, and controlling an amplitude of a signal in which the offset voltage is cancelled out geomagnetic compass sensor, canceling an offset response to a gain control signal; (Col. 2, lines 55-67)

an analog/digital (AD) converter for converting analog signals from the analog signal processor into a digital signal; (Col.3, lines 41-42) and

digital signal processor for measuring a maximum value and a minimum value associated with the digital signal from the converter, deciding offset voltage and the amplitude on the basis of the maximum and minimum values, and outputting, to the analog signal processor, the offset control signal to be used for canceling the decided

offset voltage and the gain control signal be used for controlling the decided amplitude such that lies within an allowable input range for the A/D converter. (Col.3, lines 47-51)

***Allowable Subject Matter***

Claims 2-8 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

***Conclusion***

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Clymer et al. (USPN 6,242,907) teaches an apparatus and method of determining the orientation of an object relative to a magnetic field, and Levi et al. (USPUB 20040020064) teaches a Gyro aided magnetic compass.
